

## T-Mobile myTouch 3G Slide

Wednesday, 05 May 2010

Surely, T-Mobile is betting highly on the Android operating system, as the company has released a barrage full of such smartphones into the market. In fact, T-Mobile has just released the T-Mobile myTouch 3G Slide, whereby this particular phone will run on the Android 2.1. Generally, the T-Mobile myTouch 3G Slide is pretty sleek, whereby it has a slider keyboard which slides out to provide you with a nifty QWERTY keyboard.

On the other hand, the T-Mobile myTouch 3G Slide also has a 3.4 inch screen. And if you are searching for a device which offers a full range of connectivity, I'm sure the T-Mobile myTouch 3G Slide is the ideal smartphone, as it allows you to connect to various networks, namely, 3G, HSPA, WiFi, and GPRS. Also, the T-Mobile myTouch 3G Slide comes with a slightly better 5.0 megapixel camera.

Well I'm sure that you are aware that all Android devices are able to utilize an assorted range of applications from Google, namely Google Maps, and etc, thus I believe that these features are one of the major advantages of using Android.

Take a look at the T-Mobile myTouch 3G Slide:
