

Panasonic Lumix FX75

Tuesday, 01 June 2010

Apparently, Panasonic has yet again released another digital camera for consumers. Dubbed as the Panasonic Lumix FX75, this particular camera comes with a 14.1 megapixel sensor. On the other hand, the digital camera also comes equipped with the F2.2 lens, which can give consumers up to 5x optical zoom.

Also, the Panasonic Lumix FX75 is capable of recording 720p videos, and it also has a nifty 3-inch touchscreen, which gives you the flexibility of controls on the digital camera. Well if you have been waiting anxiously to get one of these Panasonic Lumix FX75 digital cameras, perhaps it's time that you should buy one already.

Take a look at the Panasonic Lumix FX75:
