
Sensor-laden SensoGlove: Play Golf Like a Pro

Tuesday, 28 September 2010

Wouldn't it be nice if Tiger Woods was to teach you on how to play golf – his way? Surely, Tiger Woods must have super-sensitive hands, as clearly, he can make perfect shots while playing golf. Nevertheless, if you want to play golf like a pro, perhaps you should improve your swings, simply by ‘sensing’ what went wrong in your previous shot.

Generally, the SensoGlove is a sensor-laden golf glove, whereby the wearer can wear this particular glove while teeing, and the glove will automatically read the user's grip pressure. Also, the SensoGlove will collect data from your swings, and it can display such information through a sweat-proof 1.2 inch LED monitor, which is situated on top of the glove. Surely, the SensoGlove can give you warnings whenever you exceeded your target grip pressure, and it even can the capability to show you which fingers are squeezing the golf club too tightly.

Well you can purchase the SensoGlove for just \$89 – a bargain for golf lovers right?
