
Qualcomm Unveils Dual-core Snapdragon Reference Handset

Saturday, 15 January 2011

Well Qualcomm is one of the mainstream microprocessor manufacturers for mobile computing devices and smartphones. In fact, Qualcomm's Snapdragon processors are one of the most widely used microprocessors in an assorted range of smartphones. Furthermore, Qualcomm continues to lead the mobile microprocessor market through revolutionizing their processors for future smartphones.

Also, it seems Qualcomm has just recently showcased their latest dual-core Snapdragon reference handset at the CES event recently, whereby the respective phone runs on the latest dual-core processor. Of course, giving your smartphones double the processing capability would definitely open up a whole new range of possibilities.
