
Kondo Spring-loaded Spider Robot

Saturday, 09 April 2011

Robots are a craze these days, as robotics manufacturer in Japan has always successfully creates huge hypes over their robotics toys and other technology. Nevertheless, the Kondo is yet another robot created by the Japanese counterpart, whereby the spring-loaded robot resembles a spider, and it also boasts improved performances and stability too.

Generally, the Kondo was developed for educational purposes, but the manufacturer has not limited it for research and hobbyist market too. On the other hand, the Kondo is also equipped with a 10.8V 800mAh NiMH battery, 12 servos, software, and also a frame that can be equipped with cameras, grippers, and etc. Well the Kondo can be bought for ¥76,000 (about \$880), and will be available in Japan next month. Would you like a spider robot?
