

Huawei MediaPad

Monday, 20 June 2011

Apparently, Huawei has made their bid to enter the tablet market, whereby the company has unveiled their very first tablet, dubbed as the MediaPad. Basically, the MediaPad can be considered as the world's first tablet that will operate on the latest Android 3.2 operating system. Featuring a 7-inch screen, the MediaPad measures a mere 10.5mm, has a 217-pixel per inch IPS capacitive touchpanel, 5-megapixel camera, and it also runs on the dual-core 1.2GHz Qualcomm processor.

Also, the MediaPad supports HSPA+ (14.4Mbps) 3G networks, and comes with 8GB of internal storage. It comes pre-loaded with Facebook, Twitter, and Documents To Go. Since it is an Android system, the onboard Flash 10.3 player will ensure that you'll get to watch all the Flash media without a hitch. According to Huawei, the MediaPad will be available in the United States in Q3 2011.
