

playGo USB Wireless Audio

Friday, 26 August 2011

For audiophiles that want to remove the clutter of wires on their desk, while enhancing the audio quality by placing their speakers at ideal locations, should definitely take a closer look at the playGo USB wireless audio system. Basically, the playGo USB is actually a transmission unit that is connected via the microUSB port on your computer. On the other hand, the playGo USB also acts as a wireless transmission unit that connects your HiFi with RCA or optical cables to your computer.

Basically, the playGo USB uses the 2.4GHz band to send 24-bit sound to your audio kit. There's also a layer of LEDs onboard the device that adds some color to your overall musical experience too. Of course, the playGo USB can be purchased for \$400 at the moment, since it's on sale, and it will be back up to \$450, once the sale ends — so grab it fast today!
